Pará

FEDERAL INSTITUTE OF PARÁ

The Federal Institute of Pará (IFPA) is a teaching institution which offers basic, vocational, and higher education with a diverse and decentralized approach. IFPA is specialized in vocational and technological education, combining technical and technological knowledge with pedagogical practices, offering free and quality education, promoting vocational, scientific and technological education with a citizen foundation, through teaching, research, outreach and innovation actions. Thus, regardless of the level, all our students count on a robust infrastructure for classes, where practice is aligned to the theory taught in the classroom.

TEACHING

IFPA acts on the concept of “Verticalization of education”, in which the same institution offers courses from secondary to higher education and students have the possibility to follow a continuous academic pathway within one institution. At IFPA, we offer courses from secondary school up to postgraduate studies, always pursuing quality vocational and technological training and focused on sustainable development in the regions where it operates.

The technical courses for secondary school offer a combination of theory and practice, which prepare students for a variety of areas in the productive sector. There are three types of qualifications: Integrated (vocational education along with secondary school); Integrated for Youth and Adult Education; and subsequent (for students who have finished secondary school).

IFPA also offers undergraduate courses for Technologist, Bachelor’s and Teaching degrees. Moreover, we offer certificate program courses and graduate courses, such as master’s and doctor’s degrees, which can focus on a deeper specific area of expertise, aligned with the job market, and aiming at a higher level of professional qualification.

RESEARCH AND INNOVATION

Research is an essential part of our students' routine, who are motivated to contribute to science since high school. That's why the Institute hosts a considerable number of Research Groups in various fields of knowledge.

In addition, the Center of Innovation and Technology Transfer (NITT) at IFPA prepares professionals for the applicability and development of Technological Innovation. The Center also diffuses technology and manages processes for the production of goods and services, and, finally, inspires innovation and scientific and technological research, including strategies and actions related to intellectual property.

OUTREACH ACTIVITIES

The Outreach activities at IFPA aim to socialize the access to knowledge, guaranteeing a transformative connection between the Institute and society, as well as the encouragement to entrepreneurship. Thus, the knowledge generated inside the institution is shared with the outside community, so that all may benefit from the knowledge developed in educational, scientific, and technological environments.

Internationalization to students as well as faculty and staff is also our focus. At present, IFPA has eight international partnerships established with institutions from Portugal, France, Canada, and Ireland.

INCLUSION AND DIVERSITY

There is a Center for Assistance to People with Special Educational Needs (Napne) in each campus of IFPA which aims to grant access to all groups that have been historically excluded from the educational system. The Center dedicates special attention to students who have specific educational needs, with the main purpose of inclusion in the job market. Low-income students have the right of financial aid through a student retention grant called "Auxílio Permanência". Besides that, affirmative actions in application processes at IFPA guarantee admission slots for targeted populations.

As of now, IFPA has 18 campuses, covering over 70% of Pará State territory and offering courses according to the local productive arrangements. The construction of five new campuses has begun in the cities of **Barcarena**, **Tailândia**, **Viseu**, **Redenção** and **Alenquer**.

Technological education areas:

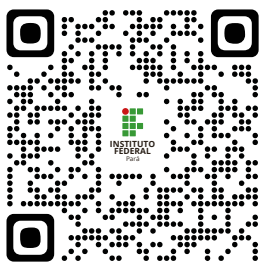

- * Environment and Health
- * Social and Educational Development
- * Industrial Processes and Control
- * Business and Management
- * Information and Communication
- * Infrastructure
- * Food Production
- * Cultural Production and Design
- * Industrial Production
- * Natural Resources
- * Safety and Security
- * Tourism, Hospitality and Leisure
